

Project: Moving America

Goal:

Explore interstate migration flows and labor market conditions across U.S. states.

why people move?

- jobs
- cost of living
- weather
- lifestyle

Visual ideas

- migration map
- flow network
- trend lines
- rankings

Interstate Migration

outcomes/impact

- population shift
- economy
- labor market

data sources

- U.S. Census (ACS migration)
- BLS (unemployment)

key questions

- which states gain/lose people?
- how is migration related to unemployment?
- what are the major flows?

metrics

- inflow
- outflow
- net migration
- unemployment rate

Workflow

1. Data Collection & Preparation
 - merge datasets by state & year
 - handle missing values
 - calculate inflow, outflow, net migration

2. Data Cleaning
 - merge datasets by state & year
 - handle missing values
 - calculate inflow, outflow, net migration

3. Analysis
 - ranking states by net migration
 - trends over time
 - migration vs. unemployment correlation

4. Visualization (Streamlit App)
 - map of US with arrows showing migration
 - line graph showing trends
 - network diagram showing connections

5. Insights
 - Sun Belt states are gaining population
 - Large states like CA, NY have net outflow
 - Migration relates to job market conditions

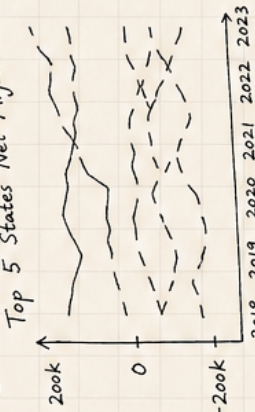

* Focus on net migration (inflow - outflow), not total population change.

1 Migration Map (Net Migration)

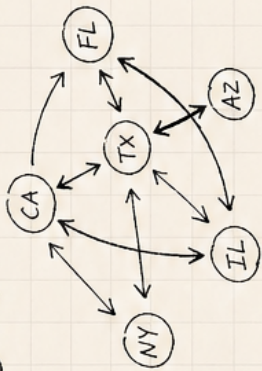

idea: color states by net migration (green = gain, red = loss)

2 Trends Over Time

idea: show top gainers & losers over time.

3 Migration Network

idea: flow map of people moving between states (thicker = more flow)

4 Data Structure

- migration-flows.csv

year	origin	destination	net_migration
2023	CA	TX	-45,231
2023	CA	FL	-32,112
2023	TX	CA	28,771
...	...	...	...

- unemployment.csv

year	state	unemployment_rate
2023	CA	4.1%
...	...	...

Possible Extensions / Future Ideas

- add population & economic indicators
- interactive filters (age, gender, income)
- predict future migration trends
